## Notes:

- 1. These casks are in storage service at Dresden (four) and Hatch (three).
- 2. These casks are in storage service at Humbolt Bay. One of the six casks is used for storage of greater than Class C waste.
- 3. Several NAC-STC transport casks have been fabricated and are in transportation service outside the United States.
- 4. TN-40 transportation casks are authorized for transport of fuel currently in storage at the Prairie Island Nuclear Generating Plant and are not authorized for reuse after unloading. The TN-32B and TN-40HT do not currently have a transport Certificate Compliance. It is currently assumed the eventual transport Certificates of Compliance for the TN-32 (and its variants) and TN-40HT transportation casks will have similar restrictions.
- 5. The HI-STAR 180 also has a variant: the HI-STAR 180D.
